Career Objective:

To start my career as a Full Stack Developer within an organization, where I can enjoy developing innovative products, will get to work on real world business problems, and can have fun and adventures with colleagues.

Work History:

May 2017-Present:
Application Developer: Bank of New York Mellon Technology

Nov 2016- May 2017:
Application Developer Trainee: Bank of New York Mellon Technology

GTM Portal Flex to Angular migration: The existing Global Transaction Management portal was migrated from FLEX UI to Angular 5 screens. REST services were designed for communication with backed DB2 database.

I worked on drop 5 – LTE and Sysplex modules Angular screens, backend REST services and integration.
I also worked on Veracode Vulnerabilities fixes.

TradeflowReport Scheduler: Developing an application for scheduling and sending the reports through Email or FTP in Excel and HTML format from BNY MELLON to its BW and BAU clients.

I developed this application as an individual project. The technologies used were: core java, spring framework and JDBC. API used were Apache POI API for creating excels sheets and JAVA mail API for sending emails.

Breater Outsourcing System: An Application for Employee, Assets and Departments management was developed using the Spring MVC Framework, JDBC template, JSP and PL-Sql Procedures.

I was involved in all the software development life cycle phases. My main role was to develop Asset and Department modules using Spring JDBC template, SQL procedures, and JSP.
